An Intellectual History of School Leadership Practice and Research Helen M. Gunter 2016-01-28 An Intellectual History of School Leadership Practice and Research presents a detailed and critical account of the ideas that underpin the practice of educational leadership, through drawing on over 20 years of research into those who generate, popularise and use those ideas. It moves from abstracted accounts of knowledge claims based on studying field outputs, towards the biographies and practices of those actively involved in the production and use of field knowledge. The book presents a critical account of the ideas underpinning educational leadership, and engages with those ideas by examining the origins, development and use of conceptual frameworks and models of best practice. It deploys an original approach to the design and composition of an intellectual history, and as such it speaks to a wider audience of scholars who are interested in developing and deploying such approaches in their particular fields.

Human Strengths and Resilience Grant J. Rich 2017-12-18 Human Strengths and Resilience fills an important gap in current literature on trauma survivors by explicitly focusing on international work concerning positive psychology and strength-based approaches to post-traumatic growth (PTG) and resilience in understudied developing nations like Haiti, Cambodia, India, and Syria.

Storytelling and the Future of Organizations David M. Boje 2011-04-26 Storytelling is part of social action and interaction that actually shapes the future of organizations. Organization and management studies have overwhelmingly focused to date on rational narrative structures with beginnings, middles, and ends, where narrative has proved to be a handy concept in qualitative studies. Far less attention is given however to the more spontaneous and 'non-staged' storytelling that occurs in organizations. Storytelling and the Future of Organizations explores the science and practice of 'antenarrative' because that is how the future of organization is shaped. Antenarrative is a term invented by David M. Boje in 2001, and is defined as a 'bet on the future,' as 'before' narrative linearity, coherence, and stability sets in. Antenarrative is all about 'prospective sensemaking,' betting on the future before narrative retrospection fossilizes the past. Antenarrative storytelling is therefore agential in ways that traditional narratology has yet to come to grips with. This handbook contribution is bringing together a decade of scholarship on 'antenarrative.' It is the first volume to offer such a varied but systematic examination of non-traditional narrative inquiry in the management realm, organizing and developing its approach, and providing new insights for management students and scholars.

Fitting The Task To The Human, Fifth Edition E. Grandjean 1997-07-31 Our working conditions have undergone rapid and fundamental changes during the last few years. One example is the widespread use of the individual computer in the shop, office and home. Another major development is that women now hold many jobs that used to be in the male domain, and that many more women choose a life-long occupational career. Workforces, tasks, conditions and tools are changing. Many office and industrial workers are tied to human-machine systems. Repetitive work can create cumulative health problems such as the often reported visual strains, mental stress and physical injury. Proper ergonomic measures can avoid such harmful effects and instead promote health conditions which are both efficient and agreeable. In this latest edition of Fitting the Task to the Human, Professor Karl Kroemer has revised and updated the text and data while remaining true to the spirit of Professor Etienne Grandjean's earlier editions. This aim is, as before, to impart basic knowledge of occupational ergonomics in a straightforward and lucid fashion to those responsible for the design, management and safety of people in the workplace, and to those who study it.

Writing Math Research Papers - 5th Ed. Robert Gerver 2017-12-01 Mathematics research papers provide a forum for all mathematics enthusiasts to exercise their mathematical experience, expertise and excitement. The research paper process epitomizes the differentiation of instruction, as each student chooses their own topic and extends it as far as their motivation and desire takes them. The features and benefits of the research paper process offer a natural alignment with all eight Common Core State Standards for Mathematical Practice. Writing Math Research Papers serves both as a text for students and as a resource for instructors and administrators. The Writing Math Research Papers program started at North Shore High School in 1991, and it received the 1997 Chevron Best Practices in Education Award as the premier high school math course in the United States. Author Robert Gerver's articles on high school mathematics research programs were featured in the National Council of Teachers of Mathematics publication Developing Mathematically Promising Students, the NCTM's 1999 Yearbook, Developing Mathematical Reasoning in Grades K - 12, and in the September 2017 issue of the

Mathematics Teacher.

FAQs on Vaccines and Immunization Practices Vipin M Vashishtha, Ajay Kalra, Naveen Thacker 2011 This book is an attempt to fill this void by providing contributions from experts who have a vast information and knowledge on the subject of Vaccines and Immunization. They have devoted a lot of time and efforts to answer the questions on the basis of the latest information that is available today right from the Basics of Immunology to Vaccines in the pipeline and Therapeutic vaccines, besides talking about the changes in technologies and evolution of different adjuvants and combinations. There is a paucity of a decent book on immunization in this format. Often, the FAQ books are criticized. *Manual of Definitive Surgical Trauma Care, Fifth Edition* Kenneth David Boffard 2019-05-22 Developed for the International Association for Trauma Surgery and Intensive Care (IATSIC), the *Manual of Definitive Surgical Trauma Care 5e* is ideal for training all surgeons who encounter major surgical trauma on an infrequent basis. This new edition includes both an e-version, and also a microSD card containing over 20 operative videos. The increasing role of non-operative management (NOM) has been recognised, and the Military Module is substantially updated to reflect recent conflict experience. An expanded section highlights trauma management under austere conditions. Written by faculty who teach the DSTC Course, this definitive and well established book focuses on life-saving surgical techniques to use in challenging and unfamiliar incidents of trauma.

PG Textbook of Pediatrics Piyush Gupta 2015-08-31 The book attempts to provide the essential information that postgraduates throughout India need to capture to effectively address the health problems that our children and youth may face in the times to come. Our objective is to be comprehensive yet concise and reader friendly, embracing both the new advances in science as well as the time-honored art of pediatric practice. Both Indian and international experts in respective fields have provided the details which have been further scrutinized for exposition and usefulness to pediatric postgraduates by a chosen team of eminent academicians. We have liberally included tables, line diagrams, images, clinical photographs, illustrative figures, flowcharts and algorithms in the main text. The book is divided in 10 major Parts and further arranged into 51 Sections to cover all aspects of postgraduate pediatric curriculum. Themes which have major public health relevance for India are extensively covered. It is almost impossible to cover all pediatric problems with the same degree of detail and hence a careful balance has been made in the details of description of diseases and their management to the needs of the students, and to keep the book to a manageable size. Take-home messages are provided at the end of each chapter. Selected recent references, mostly leading articles, reviews and position statements, are provided for more detailed information if desired by the student or the teacher.

Engineering Ethics for a Globalized World Colleen Murphy 2015-06-22 This volume identifies, discusses and addresses the wide array of ethical issues that have emerged for engineers due to the rise of a global economy. To date, there has been no systematic treatment of the particular challenges globalization poses for engineering ethics standards and education. This volume concentrates on precisely this challenge. Scholars and practitioners from diverse national and professional backgrounds discuss the ethical issues emerging from the inherent symbiotic relationship between the engineering profession and globalization. Through their discussions a deeper and more complete understanding of the precise ways in which globalization impacts the formulation and justification of ethical standards in engineering as well as the curriculum and pedagogy of engineering ethics education emerges. The world today is witnessing an unprecedented demand for engineers and other science and technology professionals with advanced degrees due to both the off-shoring of western jobs and the rapid development of non-Western countries. The current flow of technology and professionals is from the West to the rest of the world. Professional practices followed by Western (or Western-trained) engineers are often based on presuppositions which can be in fundamental disagreement with the viewpoints of non-Westerners. A successful engineering solution cannot be simply technically sound, but also must account for cultural, social and religious constraints. For these reasons, existing Western standards cannot simply be exported to other countries. Divided into two parts, Part I of the volume provides an overview of particular dimensions of globalization and the criteria that an adequate engineering ethics framework must satisfy in a globalized world. Part II of the volume considers pedagogical challenges and aims in engineering ethics education that is global in character.

International Perspectives on Teaching Rival Histories Henrik Åström Elmersjö 2017-04-04 This book presents a survey of approaches to dealing with 'rival histories' in the classroom, arguing that approaching this problem requires great sensitivity to differing national, educational and narrative contexts. Contested narratives and disputed histories have long been an important issue in history-teaching all over the world, and have even been described as the 'history' or 'culture' wars. In this book, authors from across the globe ponder the question "what can teachers do (and what are they doing) to address conflicting narratives of the same past?", and puts an epistemological issue at the heart of the discussion: what does it mean for the epistemology of history, if it is possible to teach more than one narrative? Divided into three sections that deal with historical cultures, multicultural societies and multiperspectivity, the chapters of the book showcase that dealing with rival histories is very much dependent on context, and that diverse teaching traditions and societal debates mean that teachers' abilities in engaging with the teaching of rival narratives are very different. The volume will be compelling reading for students and researchers in the fields of education, history, sociology and philosophy, as well as practising teachers.
