So, it's no wonder you're excited about your new Sony RX100 V, a tiny pocket-sized camera with full-sized features, including a new sensor design that allows shooting rapid-fire snapshots at up to 24 frames a second, lightning-fast phase detect autofocus, slo-mo movies that can be played back at speeds 40X slower than normal, and Ultra High Definition 4K video. If you can't decide on what basic settings to use with your camera because you can't figure out how changing ISO or white balance or focus defaults will affect your pictures, you need this guide.
